

Attention Manitoba Construction Project Managers and Construction Safety Managers

Boge & Boge is in the process of securing COR (“Certificate of Recognition”) safety certification and is now pleased to offer our services to assist other firms also involved in this process.

As you are aware, we have structural and mechanical engineering expertise. However, in addition to our engineering expertise, we also have personnel with legal training as well as writing, editorial, and layout experience. Hence, we can offer Manitoba construction firms the following:

- Assistance with drafting, editing and publishing safety manuals required by firms seeking COR Certification
- Assistance with creating CD Rom, Internet or Intranet versions of safety manuals with hypertext links
- Assistance with safety audits
- Creation of publication-ready Safety Forms
- Creation of policies such as Harassment Prevention, Violence Prevention, Musculoskeletal Injury Prevention, Confined Space and Hearing Conservation
- Creation of fully-documented and complete Safe Work Practices and Safe Job Procedures, together with illustrations
- Assistance with the creation of in-house training programs including company-specific safety orientations and supervisor training in the basics of Manitoba workplace safety legislation

If you are interested in talking to us what we can do for you in the safety arena, please contact Hans E. Boge (hanseb@boge-boge.com) via e-mail or by calling 942-7276.
